

**Voiceover:**

Take a powerful step in building new tissue ...with Juven.

Juven is a refreshing, therapeutic nutrition drink that is designed to enhance collagen formation in as little as two weeks. Collagen is a building block of new tissue to help your body repair after injury, surgery, and wounds.

Juven is formulated with 3 powerful ingredients: arginine, glutamine, and Revigor, a source of HMB. These ingredients work together to support tissue building.

Arginine is an amino acid that helps promote blood flow in the body. Increased blood flow improves delivery of oxygen and nutrients ...both vital for wound-healing. Arginine also promotes building of proteins that can contribute new tissue.

Glutamine, also an amino acid, helps cells produce the building blocks needed for new tissue.

And Revigor, a source of HMB, helps protect proteins from breaking down in your body, which helps new tissue to build up.

Taking just two packets of Juven a day has been clinically shown to enhance collagen formation in as little as two weeks!
